8. Security & Legal Status
9. Risk Summary
10. Glossary
11. Official Channels & Legal Notice

1. Overview

Meridian Protocol is a fixed-supply BEP-20 token (MRDN) on BNB Smart Chain. This litepaper summarizes what exists on-chain today, what is in development, and what remains an exploratory future direction. It is descriptive and educational, not investment advice, and not a solicitation to buy or sell MRDN.

The full Whitepaper (available alongside this document) contains complete technical, legal, and risk detail. This litepaper is a faster read covering the same facts at a summary level.

2. Token Specification

Token name	Meridian Protocol
Symbol	MRDN
Standard	BEP-20
Network	BNB Smart Chain Mainnet (Chain ID 56)
Total supply	1,000,000,000 MRDN
Decimals	18
Supply model	Fixed — no mint function
Contract address	0xd4025a390a0b2a606f24Ea33A902D10D978715F2
Source verification	Verified on BscScan
Admin functions	None

3. Technical Summary

The MRDN contract is a minimal BEP-20 implementation built on OpenZeppelin's standard, widely audited base token contract. The full fixed supply was minted once, at deployment, to a single initial holder address. There is no owner variable and no function to mint, pause, or blacklist after deployment.

This design minimizes custom code and the vulnerabilities that come with it, at the cost of having no built-in vesting or timelock — any future distribution structure will need to be built and disclosed separately.

An informal, non-certified AI-assisted code read-through is available on the project website. It is not a substitute for the independent audit described in Section 8.

4. Utility — Current, In Development, Future

CURRENT

- Verified, transferable BEP-20 token.
- MeridianStaking is live and source-verified on BSC Mainnet (0xE4679e40...786c3D3eb). Holders can stake MRDN, earn continuous rewards, and unstake at any time with no lock-in.
- No governance or access system is live today.

IN DEVELOPMENT

- Community structure.
- Tokenomics finalization.
- Independent manual security audit of the staking contract.

FUTURE — EXPLORATORY, NOT COMMITTED

- Lightweight community governance participation (not full on-chain DAO infrastructure).
- Ecosystem rewards, scoped to a small independent team's real capacity.

No guaranteed yield or investment return is promised for any current or future feature. Staking rewards depend on the reward pool being funded and an active rate being set.

5. Tokenomics Snapshot

Total supply: 1,000,000,000 MRDN (fixed). No wallet-level allocation has been finalized yet.

Community & Ecosystem	TBD
Liquidity	TBD
Treasury	TBD
Founder / Team	TBD
Marketing	TBD
Strategic Reserve	TBD

Circulating supply: not yet defined — no distribution has occurred. Full framework and status definitions are in the Whitepaper, Section 8.

6. Liquidity Status

Liquidity status	Preparation / pending launch
Liquidity lock	Not yet established
Trading infrastructure	Coming soon
Exchange listings	None

Liquidity will not be deployed before the independent audit and legal review are complete. Full sequencing plan is in the Whitepaper, Section 9.

7. Roadmap

Phase 1 — Foundation	COMPLETED
Phase 2 — Security & Documentation	IN PROGRESS
Phase 3 — Liquidity & Market Infrastructure	PLANNED
Phase 4 — Ecosystem	PLANNED
Phase 5 — Expansion	FUTURE

8. Security & Legal Status

Source code verification	VERIFIED (both contracts)
SolidityScan — MRDN token	95.57/100, 0 Critical / 0 High findings
SolidityScan — staking contract	90.77/100, 0 Critical / 0 High findings
Independent manual security audit	NOT YET COMPLETED
Legal / securities review	PLANNED

SolidityScan is an automated scanner, not a substitute for an independent manual audit. See the full Whitepaper, Section 11, for details on this distinction.

Meridian Protocol will never request your seed phrase, private key, or wallet password.

9. Risk Summary

MARKET RISK — May have no active market; price may be volatile if a market forms.

LIQUIDITY RISK — No liquidity provided yet; future liquidity may be limited or withdrawn.

TECHNOLOGY RISK — Contract is unaudited; smart contracts can contain undiscovered defects.

REGULATORY RISK — No legal/securities-classification opinion obtained in any jurisdiction.

UTILITY DEVELOPMENT RISK — Described utility is a roadmap direction, not a live feature.

CONCENTRATION RISK — Full supply currently resides in a single initial holder address.

Full detail in the Whitepaper, Section 13. Nothing here is financial, investment, tax, or legal advice.

10. Glossary

BEP-20	BNB Smart Chain's token standard.
Fixed supply	Total tokens set at deployment; cannot be increased.
Liquidity lock	A mechanism preventing withdrawal of pooled liquidity until a stated date.
Security audit	A named third party's structured review of contract code, resulting in a public report.
Vesting	Gradual release of allocated tokens over time rather than all at once.
